

FitBuddy Project

Topic 2 – Gemini API

The Gemini API provides the generative AI functionality used by FitBuddy.

Key Points

- Receives a prompt containing the user's fitness information.
- Generates a structured 7-day workout plan.
- Generates a concise nutrition or recovery tip.
- Uses user feedback and the original plan to create an updated plan.
- The API key should be stored securely as an environment variable.

Project relevance: This topic is one of the required pre-requisites for developing and running the FitBuddy application.
