

FitBuddy Project

Topic 3 – HTML, CSS and Jinja2

HTML creates page structure, CSS controls presentation, and Jinja2 inserts dynamic data into HTML pages.

Key Points

- HTML forms collect username, user ID, age, weight, goal, and intensity.
- CSS controls layout, spacing, colors, buttons, and responsive design.
- Jinja2 displays values returned by FastAPI.
- Jinja2 loops can display multiple users in the admin page.
- FitBuddy uses index.html, result.html, and all_users.html.

Project relevance: This topic is one of the required pre-requisites for developing and running the FitBuddy application.
