

FitBuddy Project

Topic 8 – Uvicorn ASGI Server

Uvicorn is the server used to run the FastAPI application.

Key Points

- Runs the FastAPI ASGI application locally.
- Start the development server with: `uvicorn main:app --reload`
- The `--reload` option reloads the server after source-code changes.
- The application is normally available at `http://127.0.0.1:8000`.
- FastAPI interactive API documentation is available at `/docs`.

Project relevance: This topic is one of the required pre-requisites for developing and running the FitBuddy application.
